Project Title: Digital Calendar System

Course: Software Development

Programming Language: Java

Storage Method: File Handling (No Database)

10-Week Development Schedule

Week 1: Project Planning and Requirement Analysis

Tasks:

- Define project objectives and scope
- Identify system requirements
- Prepare feature list
- Create GitHub repository
- Design overall project workflow

Deliverable:

- Project proposal
- Requirement specification document
- Initial GitHub repository

Week 2: User Interface Design

Tasks:

- Design the main application window
- Create calendar layout
- Add navigation buttons and menu options
- Develop GUI prototype using Java Swing

Deliverable:

- Basic graphical user interface

Week 3: Calendar Module Development

Tasks:

- Display monthly calendar
- Implement previous/next month navigation
- Highlight current date
- Enable date selection

Deliverable:

- Functional calendar system

Week 4: Event Creation Module

Tasks:

- Create event input form
- Add event title, description, and date fields
- Validate user input

Deliverable:

- Event creation functionality

Week 5: Event Viewing Module

Tasks:

- Display events for selected dates
- Show event details
- Organize event listings

Deliverable:

- Event viewing system

Week 6: Event Management Module

Tasks:

- Implement edit event feature
- Implement delete event feature
- Add confirmation messages

Deliverable:

- Complete event management functionality

Week 7: File Handling Integration

Tasks:

- Save events to local files
- Load saved events automatically
- Ensure data persistence without a database

Deliverable:

- File-based storage system

Week 8: Reminder and Notification System

Tasks:

- Develop reminder functionality
- Display upcoming events
- Generate notification pop-ups

Deliverable:

- Reminder management system

Week 9: Search and User Interface Enhancement

Tasks:

- Search events by title and date
- Improve application design
- Enhance user experience

Deliverable:

- Search functionality and improved UI

Week 10: Testing, Documentation, and Final Deployment

Tasks:

- Perform system testing
- Fix bugs and errors
- Prepare project documentation
- Finalize presentation materials
- Upload final version to GitHub

Deliverable:

- Complete Digital Calendar System Software
- Project documentation
- Final GitHub repository
